Dual Horizontal/ Quick Horizontal Chopper

- Traditional, horizontal, phaco chopping tip (A)
- New, unique triangular shaped tip for performing a modified, horizontal quick chop (B)
- Horizontal quick chop tip enables chopping of the nucleus in the horizontal plane from a central location, without traversing peripherally under the anterior capsule.
- Versatile chopper provides for multiple approaches for nucleus separation
- Multi-functional chopper on a single handle
- Rounded tips to prevent posterior capsule damage
- Crafted of titanium, guaranteed for life
- Designed in cooperation with Terry Kim, MD, Associate Professor of Ophthalmology, Cornea and Refractive Surgery, Duke University Eye Center.
